

SAWS Update Instructions – Revision 3

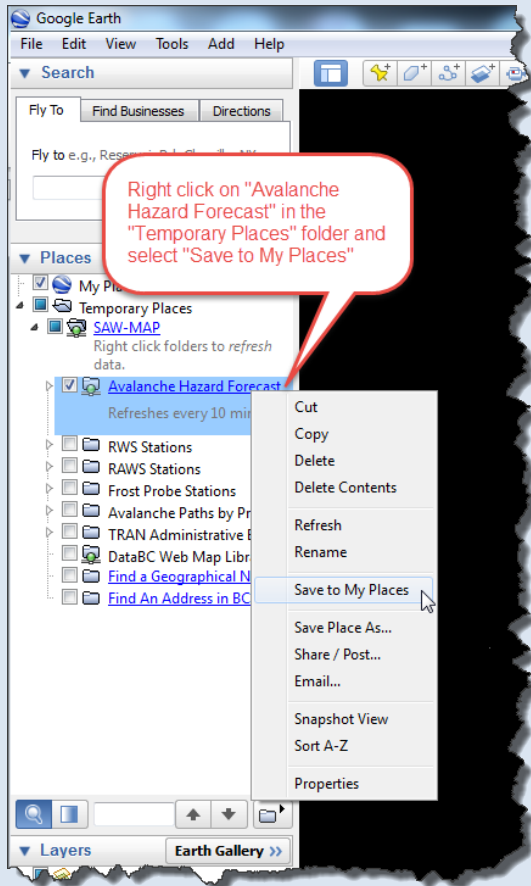

If you have a saved version of the SAWS map (i.e., you access SAWS via the “My Places” link in Google Earth), you must follow these instructions to link to the updated SAWS map.

1. Start Google Earth and enter your IDIR ID and password when prompted.
2. Delete the previously saved version of the SAWS map. Right click on “Avalanche Hazard Forecast” in the “My Places” folder in the left menu pane and select “Delete”.

3. Close Google Earth.
4. Ctrl + Click on the link below, or copy and paste into Internet Explorer:
<https://prdoas2.apps.th.gov.bc.ca/saw-map>
5. At the prompt “Do you want to open or save kml-generate.kml from prdoas2.apps.th.gov.bc.ca?”, click on the Open button.
6. Enter your IDIR ID and password in the Windows Security dialog.

- Right click on "Avalanche Hazard Forecast" in the "Temporary Places" folder in the left menu pane and select "Save to My Places". This will save the avalanche map to your Google Earth profile and will allow you to view it directly from Google Earth rather than the link above.

- When you exit Google Earth, at the prompt "You have unsaved items in your "Temporary Places" folder. Would you like to save them to your "My Places" folder?", click on the Discard button.
- Once you have saved the avalanche map to your Google Earth profile, you can view it by starting Google Earth, clicking on the checkbox beside the "Avalanche Hazard Forecast" folder in the "My Places" folder in the left menu pane, and entering your IDIR ID and password when prompted.
